WORK EXPERIENCE

- **Mantiqh** Bangalore, India
Sr Frontend developer / mobile developer Feb 2025 – Present
 - Architected **frontend solutions** across **React**, **React Native**, and **TypeScript**, improving delivery speed and reducing API integration issues by **30%**.
 - Implemented **SSR**, **bundling optimizations**, and **lazy-loading** to cut dashboard initial load time from **3.5s** → **2.1s**.
 - Developed custom **Canvas**-driven animated components for charts and UI effects, enabling fluid **micro-interactions** without degrading performance.
- **NDTCCS** Dammam, KSA
Quality Assurance Enginner (contract) Sep 2024 – Feb 2025
 - Integrated real-time **equipment** and **operational data**—including license status, calibration records, and site-location tracking using **interactive maps**—enhancing data visibility by **~40%**.
 - Automated **form-to-PDF workflows** by building dynamic templates and integrating backend services, reducing manual report-generation time by **60%**.
 - Collaborated with **cross-functional teams** and **field operators** to validate data, improve retrieval flows, and streamline dashboards—achieving a **25%** decrease in data inconsistencies.
- **Metalinex** Shanghai, China
Frontend developer (contract) Nov 2023 – Nov 2024
 - Gained hands-on experience in **industry-grade Web3 development**, working on a large **NFT gaming marketplace** and learning modern patterns for wallet connectivity, smart-contract data flows, and decentralized user interactions.
 - Contributed to **frontend architecture** using **React**, **TypeScript**, and **modular component design**, improving code maintainability and helping deliver features **20%** faster.
 - Adopted advanced engineering practices using **Husky**, **GitHub Actions**, **Docker**, **PuTTY**, and **AWS**, standardizing development workflows and reducing deployment issues by **30%**.
- **ItBigbang** Chennai, India
jr Frontend developer Aug 2022 – Sep 2023
 - Created **custom layouts** using **drag-and-drop editors**, **page builders**, and **pre-made templates**, helping deliver client websites quickly while learning the basics of **UI/UX** and **responsive design**.
 - Learned foundational frontend concepts—**HTML**, **CSS**, **JavaScript**, hosting, DNS, plugins, and theme customization—laying the groundwork for my transition into full **React/Tailwind** development.
 - Collaborated with **designers** and **senior developers** to convert client requirements into simple, functional web pages, improving my **communication skills** and understanding of real-world web workflows.

SKILLS & INTERESTS

- **Frontend:** HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Next.js, Astro.js, Tailwind CSS, Material UI, Shaden UI, Three.js, WebGL, Canvas API, Zustand, Redux Toolkit
- **Backend:** Node.js, Express.js, MongoDB, Firebase, Supabase, DBeaver, REST APIs, Basic API Design, Server-Side Rendering (Next.js)
- **Tools:** Git, GitHub, VS Code, Neovim, Postman, Jira, Notion, Figma, Slack, Discord, GitHub Actions (CI/CD), Docker, AWS (S3, CloudFront)
- **OS:** Linux (CLI and GUI), Mac, Windows

EDUCATION

- **KLS Gogte Institute of Technology** Belgaum, India
Masters in Computer Applications, Computer Science (CGPA: 6.5) Graduation Date: **Jul 2022**

PROJECT EXPERIENCE

- **Ecocrew**

A platform where users can sell recyclable

- Built the **frontend (mobile + web)** for a **marketplace** where users sell recyclables and earn **eco-coins**.
- Implemented **smooth animations** (GSAP), **landing-page effects** and a **responsive UI**, improving user experience.

- **Keys On Rent**

platform where rentals and managment

- Developed the **front-end (web + mobile)** with **interactive map integrations** improving search efficiency by **~35%**.
- Built **dashboard modules** reducing overdue rent incidents by **~30%**.
- Integrated **notifications** and **email workflows** improving response rates by **~25%**.

- **SellYourLegacy**

platform where business list ventures for sale

- Implemented **SSR**, improving loading speed by **~50%** and boosting **SEO performance**.
- Built an **admin dashboard** reducing admin overhead by **~40%**.
- Developed **responsive UI components** improving engagement by **~25%**.

- **Guided Reserve**

platform where users trade precious metals/coins

- Developed **secure login flows** reducing unauthorized access by **~30%**.
- Built **dual dashboards** improving decision-making by **~6%**.
- Implemented **real-time tracking** improving settlement time by **~40%**.

- **Bexel (NDTCCS)**

application for equipment data report gen

- Integrated **equipment status**, **calibration records**, and **mapping**, increasing visibility by **~45%**.
- Automated **form-to-PDF pipelines**, reducing delivery time by **~60%**.
- Collaborated with **field teams** ensuring **30%** fewer data errors.

- **MetalineX**

platform where gaming assets/NFTs are traded

- Developed **Web3 modules**, improving wallet onboarding by **~8%**.
- Adopted **Husky**, **GitHub Actions**, **Docker**, **AWS**, reducing build failures by **~20%**.

OPEN SOURCE

- **The API Playground**

API testing and exploration

- View **structured response data**, including **status codes**, **headers**, and **body content**.
- Customize **request headers**, **parameters**, **body content**, and **authentication methods**.
- Easily test **API endpoints** with **real-time requests and responses**, supporting multiple **HTTP methods**.

- **RoboticsAcademy**

Learn Robotics, Artificial Intelligence

- Contributed to the **documentation** and **exercise modules** by updating several **ROS**-based tutorials, improving **accessibility** and easing deployment via **Docker** images.
